Constructafloor – Ceramic Tile Underlay – Compressed Sheets

Ceramic Tile Underlay

FLOORING & DECKING

Ceramic Tile Underlay

Cemintel's Ceramic Tile Underlay is for internal use and is an easily installed and cost effective way to form a flat substrate for laying ceramic tiles over existing floors. It provides a thinner solution that minimises impact on floor levels with surrounding areas. It is an effective option to use over tongue and groove hardwood floors when tiling over them.

Compressed Sheet

Cemintel Compressed Sheets are tried and tested for proven long term strength. Designed for use in tough conditions, including wet area flooring and decking, the panels can be covered in tiles and other floor coverings.

Constructafloor™

Cemintel Constructafloor™ is a nailable, advanced lightweight, fibre cement structural flooring product available in two options: internal or external. Panels have a tongue and groove joint, which keeps stability between joists and reduces the risk of membrane cracking. As the product is nailable, installation is faster as no countersinking is required. They do not contain any magnesium chloride (salt).
