Bare Root Tree Order Form

Customer Name: _____

Date: _____

Phone no.: _____

Description	Amount

Planting bare-root trees is a great cost-effective way to establish fruit, nut and ornamental trees in your garden or orchard. As the trees are supplied bare rooted having been recently harvested, we recommend planting or potting the trees straight away when you get them home.

Here are the essential steps to follow for successful bare root tree planting:

1. **Soak the Roots:** Begin by soaking the tree roots in a bucket of water for one to two hours. This helps hydrate the roots and prepare them for planting.
2. **Dig the Planting Hole:** Dig a hole that is two times as wide as the tree's root system to aid in feeder root development. If the soil is poor, it is a good idea to add compost to your soil at this stage, making sure to mix it with the existing soil.
3. **Spread the Roots:** Gently spread out the dormant tree's roots to encourage outward growth. This helps the tree establish a strong root system.
4. **Plant at the Right Depth:** The top of the root system (where the roots meet the trunk) should be level with the soil surface, making sure to keep the graft point above the soil level.
5. **Stake and feed the Tree:** If necessary, insert a stake into the soil near the tree to provide support, just be careful not to damage any roots when placing the stake. It is a good idea to also fertilise the tree ready for the Spring growth period (both Rapid Raiser and Dynamic Lifter are great products for this).
6. **Water Thoroughly:** After planting, water the tree thoroughly to settle the soil and eliminate air pockets around the roots. Regular watering during the first growing season is essential for the tree's establishment. Mulching will also assist with maintaining moisture in summer.

Remember that bare root trees are delivered without soil around their roots, so proper care during planting is crucial.

*If your tree does not grow, please contact our nursery staff with a photo of the tree and your receipt prior to bringing the tree in. As bare-rooted trees have had their feeder roots trimmed during harvest, they will naturally be a little slower budding in Spring than already established trees. **No refunds will be given after the 31st December 2025 nor if a senior garden staff member has not been consulted prior to this date for help and advice.***
